In claim 23, line 2, delete "detecting means" and replace with --detection elements--

In claim 25, line 7, delete "energy image" and replace with --energy window--

In claim 26, line 7, delete "low energy image" and replace with --different image--

Allowable Subject Matter

3. Claims 1, 2, and 4-29 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art fails to disclose an apparatus for improved dynamic angiographic X ray imaging of a subject's body infused with contrast agent, said apparatus comprising: at least one readout chip divided into a plurality of channels wherein each one of said plurality of channels is electronically connected to one of said plurality of detection elements and

Art Unit: 2882

wherein each one of said plurality of channels is capable of converting said electric charges into digital data and wherein said at least one readout chip is provided with at least two programmable threshold discriminators; an acquisition system capable of receiving said digital data from said sensor and generate at least two electronic representations wherein one of said at least two electronic representations is attained from low energy photons and another one of said at least two electronic representations is attained from high energy photons wherein said at least two electronic representations are measured simultaneously at the subject and at a certain position of said X ray beam source; a processor capable of manipulating said at least two electronic representations into at least one image; and a display capable of displaying said at least one image, whereby said at least one image attained from at least two energy bins amplify the appearance of the contrast agent in blood vessels in respect with surrounding tissues of the subject's body, as claimed in claim 1. Claims 2 and 4-19 are allowed due to their dependency on claim 1.

Prior art fails to disclose a dynamic method for producing images of improved X ray angiography of a subject's body, said method comprising: at least one readout chip provided with at least two discriminators, said at least one readout chip divided into a plurality of channels wherein each one of said plurality of channels is electronically connected to one of said plurality of detection elements and wherein each one of said plurality of channels is capable of converting said electric charges into digital data; setting threshold levels for said at least two discriminators for each one of said plurality of channels at least once; injecting a contrast agent into blood vessels of the subject's

body; positioning said subject so that X ray beam passes through the body of the subject and attenuated X rays that passed through the subject's body are received by said sensor system; acquiring single photon counting data from a single X-ray pulse so as to simultaneously establish at least two images from at least one of low photon energy window and at least one of high energy window; and processing said at least two images so as to provide high contrast and motion artifact free image of the subject's blood vessels, as claimed in claim 20. Claims 21-29 are allowed due to their dependency on claim 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
